THE POWER OF INNOVATION

Today, a new avenue opens up in production and realization; it is now possible to make almost any creation or application flame retardant by either adding our ColdFire powder formula, or by modifying our ColdDragon Master Formula. This asserts that in the near future there will be no excuse for not being able to offer safe products, meeting the highest standards, and this by increasing all existing standards and assessment parameters nowadays. ColdFire additive and all ColdDragon products are the basis for discussion of any innovation and also the gateway to any potential need in today's industry.

HIGH PERFORMANCE FIREPROOFING SOLUTIONS

THE MISSION

Developed for performance and security, ColdDragon products are superior quality formulas that surpass the highest standards of the industry. Be it to protect people, investments or even the environment, the solutions brought by ColdDragon are the most advantageous on the market and fulfill all the needs in terms of fire security.

As much for prevention as for intervention, our engagement to develop the most efficient solutions enable us to aspire to transform the future of fire protection, by reducing human and material losses, which grow every year.

PRODUCTS

Fireproofing Coatings

ColdDragon Coating is a sprayed fireproofing material intended for applications to construction wood products, steel structures, concrete, textiles, and many others. Its intumescent action provides an excellent flame retarding protection, thermal insulation and water resistive properties. ColdDragon fireproofing coatings work with most surfaces and materials, in all fields of the industry. All ColdDragon products are 100% solvent-free and non-allergenic.

Extinguishing Agents

ColdDragon, added in combination with any industrial or civil intervention system, provides the most effective extinguishing and control efficiency. Our extinguishing agents are meant to intervene in fire situations in order to halt the propagation of flames and neutralize the blaze at the source. Developed for instant extinguishing, our intervention formulas are ideal for all types of environments and all types of fires. Whether it is for small fires, urban interventions or forest interventions, our line of extinguishing agents guarantee maximal efficiency and considerable reduction in physical harm risks. Moreover, all of our products are free of contaminants, non-toxic and ensure easy cleanup.

BEHIND THE PRODUCTS

ColdDragon was created and developed in the laboratory to succeed in offering a multi-functional fireproofing product which is ecological and resistant, in order to bring concrete and simple solutions in fields where its application was awaited for a long time.

Our researchers and chemical engineers created adaptable formulas for all needs, in numerous industrial and commercial sectors. Thanks to our research and development efforts and our technological leadership, we can guarantee highly efficient products; Our fundamental devotion to the protection of human life and material goods.

Fire Retardant Additives

ColdFire flame retardant additive is a great ally in the production of elastomers or polymers. By adding our formula to your production line, you increase the fire resistance and the restructuring of your product, in addition to reducing by 60% all toxic fumes during combustion.
